

Arithmetic operation

The screenshot shows the IntelliJ IDEA interface with a project named 'practice-class'. The 'src' directory contains a file 'logical_operator.kt'. The code in this file performs arithmetic operations on variables x, y, and z. The Run console shows the output of these operations.

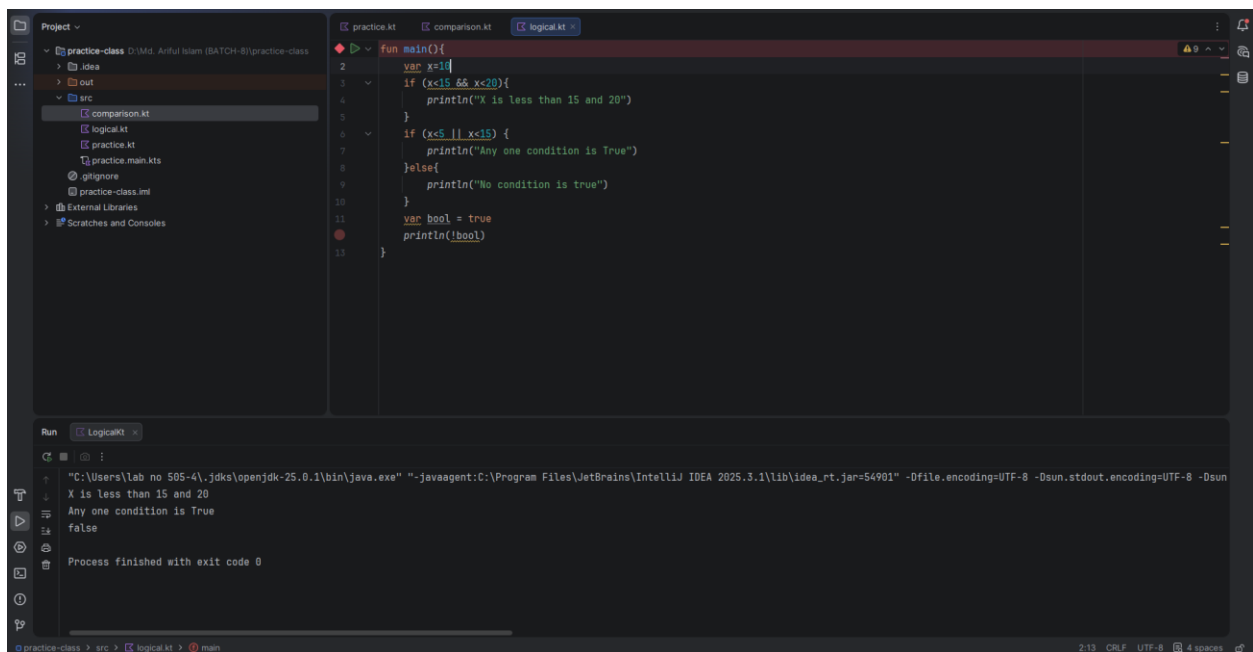

```
1 fun main(){
2     var x : Int = 10
3     var y : Int = 20
4     var z : Int=13
5
6     val sum = x+y
7     println("sum = $sum")
8     val sub = x - y
9     println("sub = $sub")
10    val mul = x*y
11    println("multiplication = $mul")
12    val div = y/x
13    println("div = $div")
14    val modulo = y%z
15    println("modulo = $modulo")
16
17    x = x++
18    println("x = $x")
19    y = y--
20    println("y = $y")
21 }
```

Run Practicekt

```
sum = 30
sub = -10
multiplication = 200
div = 2
modulo = 7
x = 10
y = 20

Process finished with exit code 0
```

Logical Operator

The screenshot shows the IntelliJ IDEA interface with a project named 'practice-class'. The 'src' directory contains a file 'logical.kt'. The code in this file uses logical operators to check conditions and print the result. The Run console shows the output of these operations.

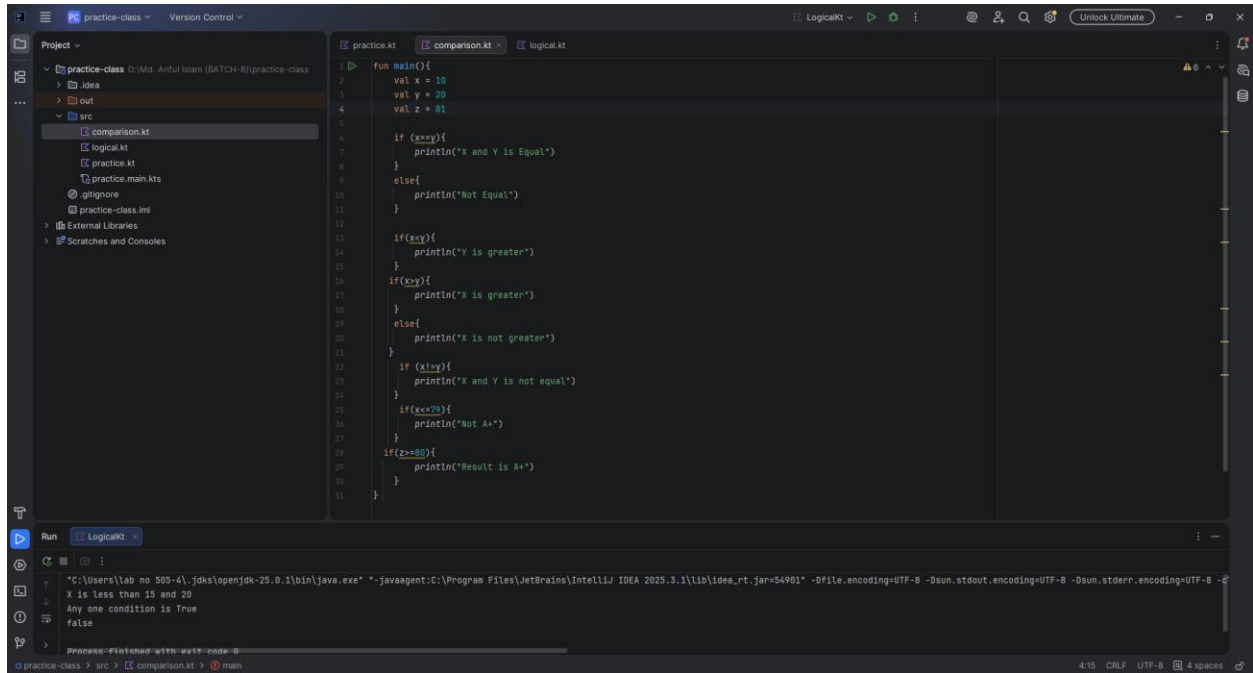

```
1 fun main(){
2     var x=14
3     if (x<15 && x<20){
4         println("X is less than 15 and 20")
5     }
6     if (x<5 || x<15) {
7         println("Any one condition is True")
8     }else{
9         println("No condition is true")
10    }
11    var bool = true
12    println(!bool)
13 }
```

Run Logicalkt

```
"C:\Users\lab no 505-4\jdk\openjdk-25.0.1\bin\java.exe" "-javaagent:C:\Program Files\JetBrains\IntelliJ IDEA 2025.3.1\lib\idea_rt.jar=54901" -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8 -Dsun
X is less than 15 and 20
Any one condition is True
false

Process finished with exit code 0
```

Comparison Operator

The screenshot displays an IDE window with a project named "practice-class". The left sidebar shows the project structure, including a "src" directory with files "comparison.kt", "logical.kt", "practice.kt", and "practice.main.kts". The main editor area shows the content of "comparison.kt", which contains a Kotlin function `main()` that demonstrates various comparison operators. The code includes variable declarations for `x`, `y`, and `z`, followed by several `if` statements using operators like `==`, `!=`, `>`, `<`, `>=`, `<=`, `&&`, and `&&&`. The bottom panel shows the output of the program, which matches the logic in the code: `X is less than 15 and 20`, `Any one condition is True`, and `false`.

```
1 fun main(){
2     val x = 10
3     val y = 20
4     val z = 81
5
6     if (x==y){
7         println("X and Y is Equal")
8     }
9     else{
10        println("Not Equal")
11    }
12
13    if(x<y){
14        println("Y is greater")
15    }
16    if(z>y){
17        println("X is greater")
18    }
19    else{
20        println("X is not greater")
21    }
22
23    if (x!=y){
24        println("X and Y is not equal")
25    }
26    if(x<=70){
27        println("Not A+")
28    }
29    if(z>=80){
30        println("Result is A+")
31    }
32 }
```

Run LogicaKt

```
*C:\Users\lab no 505-41\jdk\openjdk-25.0.1\bin\java.exe *--javaagent:C:\Program Files\JetBrains\IntelliJ IDEA 2025.3.1\lib\idea_rt.jar=54901* -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8 -Dsun.stderr.encoding=UTF-8 -D
+
+ X is less than 15 and 20
+ Any one condition is True
+ false
+
Process finished with exit code 0
```
